

AVIATION AND AIRCRAFT HANGARS

BUILDING SOLUTIONS

A safe space to store, maintain, and prepare for flight.

From small recreational planes to large commercial airliners, all aircrafts require specific infrastructure and facilities to support their operation, ranging in size from small storage sheds for single-engine planes to massive structures capable of holding multiple large commercial aircraft. Constructed with high ceilings, wide doors, and reinforced flooring to accommodate the size and weight of the aircraft they are designed to house.

Britespan fabric buildings are engineered and designed for wide-span and large interior capacity, accommodating a range of aircrafts for storage, maintenance and repairs, as well as providing shelter for pilots, passengers, and ground crews during inclement weather. Fully engineered to your site's location and climate, as either a permanent or temporary structure.
